Measures to Protect the Anonymity and Confidentiality of Participants and their Data:

measures to ensure the security and privacy of your data and information that we describe on our project website:

- Your raw data will be anonymized/de-identified with a randomly generated six-character string rather than your name,
- Your data will not be shared to external parties outside of our core research team,
- Your data will be part of a 1000+ person data set,
- Your data will be stored on password protected secure computers and 256-bit Advanced Encryption Standard (AES)-encrypted cloud drives.
- Our data storage protocol follows the General Data Protection Regulation (GDPR)
- The data you share with the interviewer and I, as the Principal Investigator, will remain confidential.
